

Systematic Reviews & AI: Method, Tools and Techniques

**Vitoria Laudisio Neira, Raffaella Moscatelli and Rosaria Petreti -
Technology Library, University of Florence**

This workshop offers a hands-on introduction to systematic literature reviews methodology and presents AI tools to support key steps of the research process.

Through practical demonstrations, we will work step by step on how to conduct a systematic review, generate search strategies, explore and organise literature, and extract conceptual patterns using AI-assisted methods.

The session will focus on a concrete case study — the concepts of urban voids, terrain vague, and vacant lands — to show how to conduct your own systematic review, including how to use relevant resources and tools.

Bring your own laptop, as several tools will be tested live during the session.
